GENERAL INSTRUCTIONS FOR "EXTRA INNING"

INSTALLATION

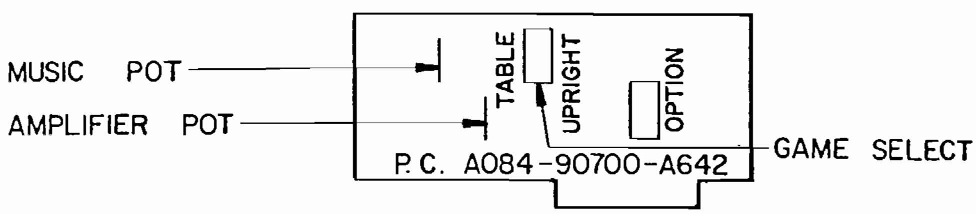

1. Remove shipping cleats located on the bottom of the cabinet.
2. Install 4provided leg levelers to bottom of cabinet and level cabinet.
3. The power is controlled by a switch located on top of the cabinet, (Upright Model) or on the bottom of the cabinet (Table Model). Plug into A.C. only 115 volts, 60 cycles. In low line areas (105 volts or less) a boost in the output voltage of the transformer may be obtained by removing the wire from the 115 volt tap of the tranformer and rewiring to the 105 volt position.

VOLTAGE CONTROL POTS:

Located on Power Supply Board (P.C. 0080-00904D) and are preset at the factory. These pots should not be tampered with unless the Distributor Service Department is contacted.

MUSIC (1Meg) AND AMPLIFIER (50K) ADJUSTMENT POTS:

Located on Game Logic Board. (P.D. A084-90700-A642) the 1 Meg Music Pot raises or lowers the volume of the background music. The 50K Amplifier Pot raised or lowers all other sounds (Cheer, Whistle, Bat Strike). See sketch below for pot locations.

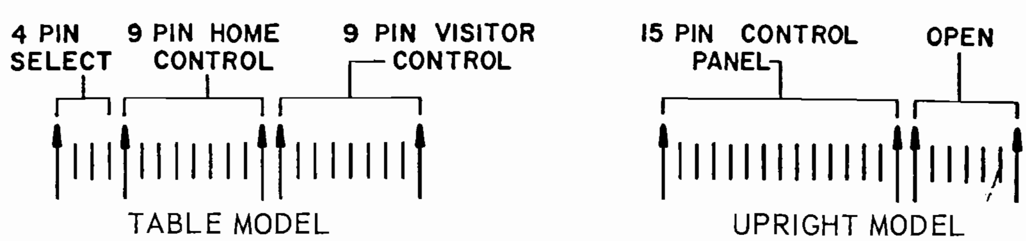

GAME SELECTION SWITCH: (Upright – Table Model)

Located on Game Logic Board. (P.C. A084-90700-A642). The Select Switch is provided to allow Logic Board flexibility. That is, the same board may be used by positioning all switches as indicated on sketch above.

COIN AND INNING OPTION SWITCH:

Located on Game Logic Board (P.C. A084-90700-A642) and may be adjusted as indicated on separate instructions in back-box area.
